Food Security Analysis Masterclass

AD019

Course Overview

The methods and difficulties involved in strategic food security planning will be clearly understood by individuals involved in sustainable development planning after taking this course.

Understanding the population's status with regard to food security is a development actor's top goal before intervening in a nation. To identify hungry and food insecure groups and determine the underlying causes, food security analysts conduct a wide range of assessments.

Participants will benefit from interactive learning as they gain a deeper understanding of strategic food security planning's key issues, such as how changing climatic conditions affect food production and how economic pressures, technological advancements, and private sector actions interact with one another. Participants will leave the workshop with the skills necessary to start organizational transformation that takes long-term trends in food security into account, along with starting effective regulation and equal access.

They consist of market evaluations, emergency assessments, and comprehensive food security and vulnerability analyses (CFSVAs.

It gives development professionals in their early and mid-career, the chance to gain a degree in a specialized subject that is becoming more and more important to state and non-state development and relief agencies around the world.

When a food maker can cut down on the time needed to identify a detected physical pollutant and find its source, significant cost savings are gained. The sooner you spot it and figure out if it was caused by malfunctioning machinery, subpar raw materials, or even a fabrication, the sooner you can restart production.

Who should attend?

This course is intended for various actor's National governments.

Non -governmental organizations

Research Organization

Agricultural extension officers
